Environmental protection guideline

Status: 04/27/2020

SAFELOG

Page 2/2

The primary goal of our business policy in environmental protection is to strengthen the responsibility, awareness and ability of our managers and employees in the environmental protection segment. We firmly believe that our strong commitment in this area serves the sustainable growth of the company.

We achieve this goal by defining the following environmental guidelines as binding elements of our business policy in order to realize our claim.

Our maxims are:

- We comply with environmentally relevant requirements and laws. We are committed to complying with the relevant laws and regulations as well as the environmental protection requirements imposed on us and to achieving our own objectives.
- We already pay attention to environmental compatibility when developing our products and creating our manufacturing processes.
- We consider the protection of the environment and the economical use of natural resources to be our social obligation.
- We are guided by the principle of sustainable management.
- We use energy, raw materials and water sparingly.
- We avoid environmental pollution such as waste, waste water, emissions and noise or keep them as low as possible.
- The impact of our activities on the environment is recorded, assessed and translated into targets and measures for improvement. We are committed to continuously working on reducing our environmental impact.
- We integrate all environmentally relevant business processes into our management system and are constantly looking for improvements.
- We promote the environmental awareness of our employees in order to jointly protect the environment in all areas of the company and to use raw materials and energy sparingly.
- We are actively committed to a balanced relationship between ecology and economy.

In order to achieve this common goal, all employees undertake to behave in accordance with the requirements of this environmental protection guideline and to actively contribute to it.
